The Remanufacturing Institute Undertakes Membership Drive

CHANTILLY, VIRGINIA— The Remanufacturing Institute (TRI) has launched a membership drive to attract remanufacturers of any type of product to join the association and participate in furthering its mission to help develop the next generation of remanufacturing technology, to disseminate information throughout the industry, and to make remanufacturing more competitive throughout the world.

According to TRI Chairman, Bill Gager, “There are thousands of companies involved in the remanufacturing of just about every type of product that is manufactured. Remanufacturing is a process based industry that is important to extending the useful life of all products.”

As a result of remanufacturing, energy and natural resources are saved, air pollution is reduced, and products are kept out of the waste stream for longer periods of time. Most importantly, greenhouse gas emissions are significantly reduced.

“The remanufacturing industry is an engine for job creation,” added Chairman Gager. “Governmental leaders should recognize this and create policies that assist remanufacturing companies in expanding their business, increasing their exports and adding thousands of jobs to the economy.”

For details on how you can join The Remanufacturing Institute to help spread the word about the benefits of remanufacturing please visit www.reman.org or contact Bill Gager at gager@buyreman.com.
